10 to 60 Watt PoE Splitters

GAF-Lighting-PD-V4
AT-USBC-Rev3
GBT-USBC-PD
GAT-USBC-PD-V4

Product Description – GAT-USBC PoE Power Splitter Family

These devices provides a powerful solution for delivering up to 65 watts of power to a USB-C device over 328ft of network cable. These splitters allow power to be carried on CAT-5e or CAT-6 network cables using 802.3af, 802.3at, or 802.3bt standards or 56 volt passive PoE. 802.3af switches can be used – but only 12 watts can be delivered without overload. 10/100/1000 or 10/100 switches can be used – the devices allow 10/100/1000 at full duplex rates to the remote device.

Intended for use with any PoE switch – these active PoE solutions negotiate with the switch to activate power and provide it to the client device. It is a compact and cost effective power solution. The PoE switch supplies 48, 51 or 56 volts DC at the source location. The higher DC voltage means the current is reduced by a factor of 9 compared to 5 volts, and then carried with 90% less loss over the Ethernet cable from the source, the USB-C converter at the remote end allows you to extend the charge distance for this application up to 328ft or 100 meters.

Simple usage:

- Step a) use an Ethernet cable to connect the RJ45 female of the GAT-USBC to your PoE switch or injector up to 100 meter distance.
- Step b) connect the USB-C output via a USB-C high current rated cable, to your device at short distance
